CampusMarket

Second-hand marketplace for Sabancı University students

Wireframes & navigation

Step 2.1 translates the approved Step 1 proposal into screen layouts and user journeys. All product content shown here is sample data.

GROUP 14

Ulaş Alpandiner (33831) · Ramazan Yücel (34056)
Alper Kaan Gözübüyük (26625)

Core scope

01 University accounts

Sign up, log in and show email verification.

02 Browse & search

Active listings, details, keyword/category/price filters.

03 Manage listings

Create, edit, delete and mark owned items as sold.

04 Campus messaging

Conversation list, ordered messages and manual refresh.

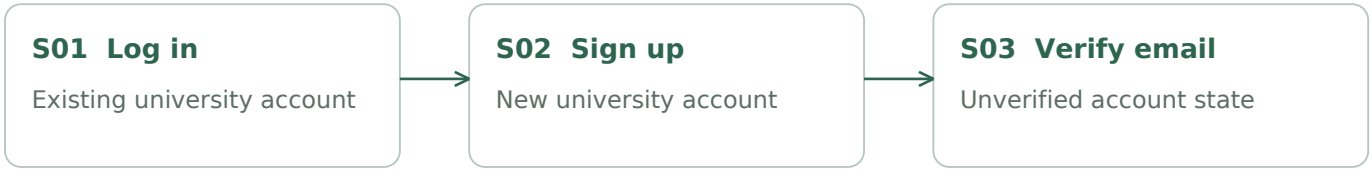

Repository

https://github.com/ulasalpandiner/CS310_Project

Navigation flow

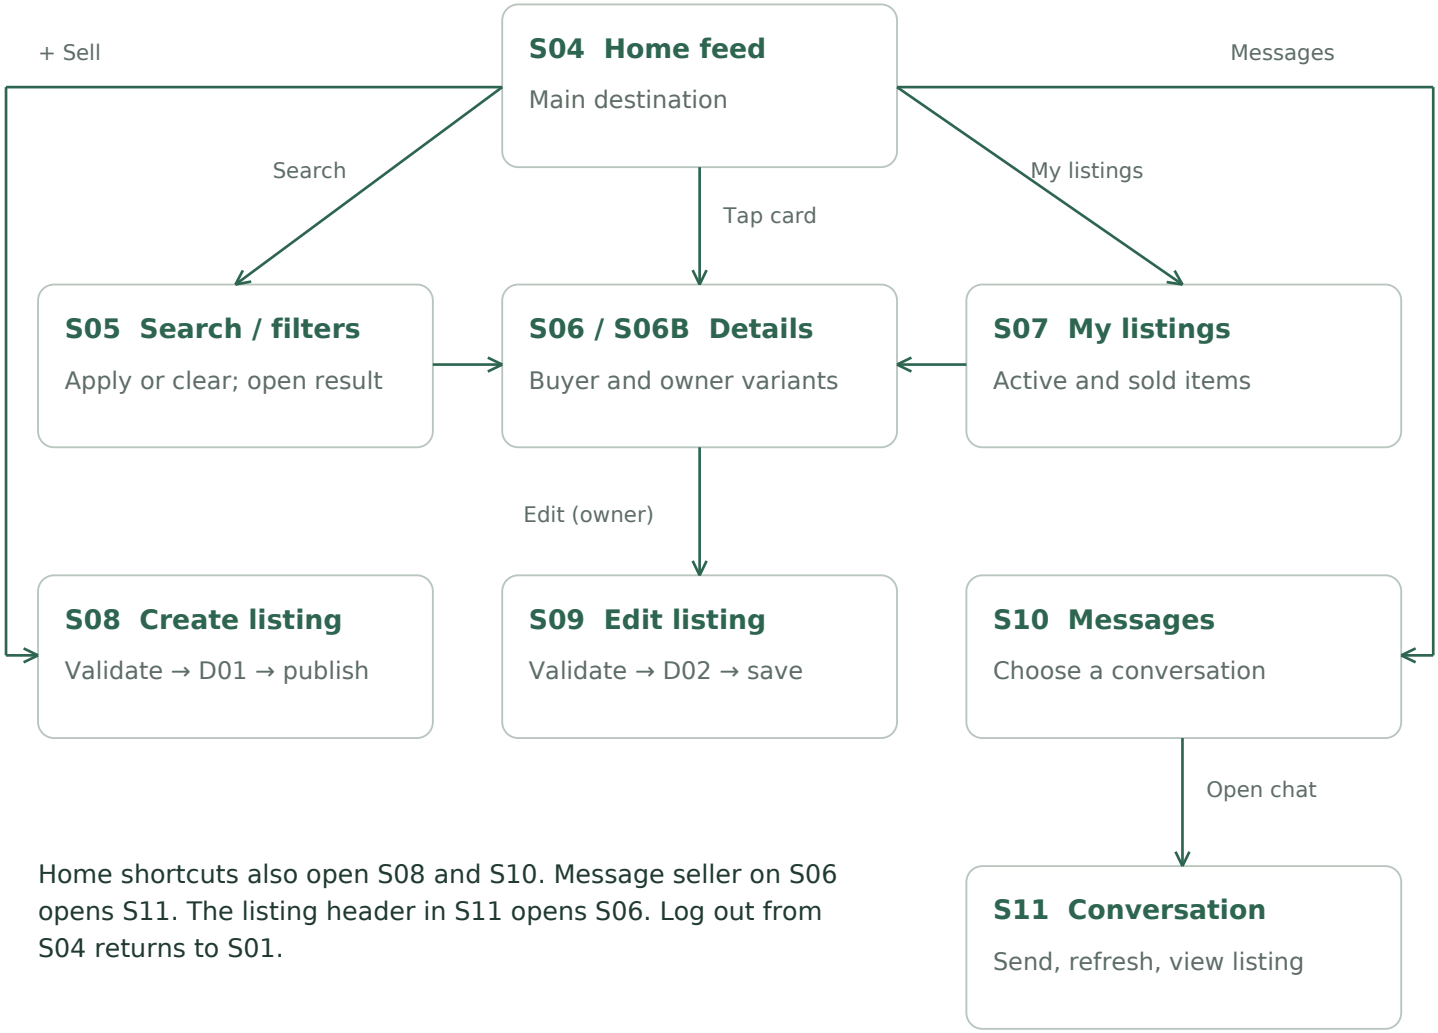

Screen IDs in the arrows match the wireframes on pages 3-8. Back returns to the screen that opened the current screen.

ACCOUNT ENTRY

S01: valid verified account → S04. Unverified account → S03. S03: verification complete → S04; otherwise stay. Account switching/back links return to S01.

BROWSE, SELL AND MESSAGE

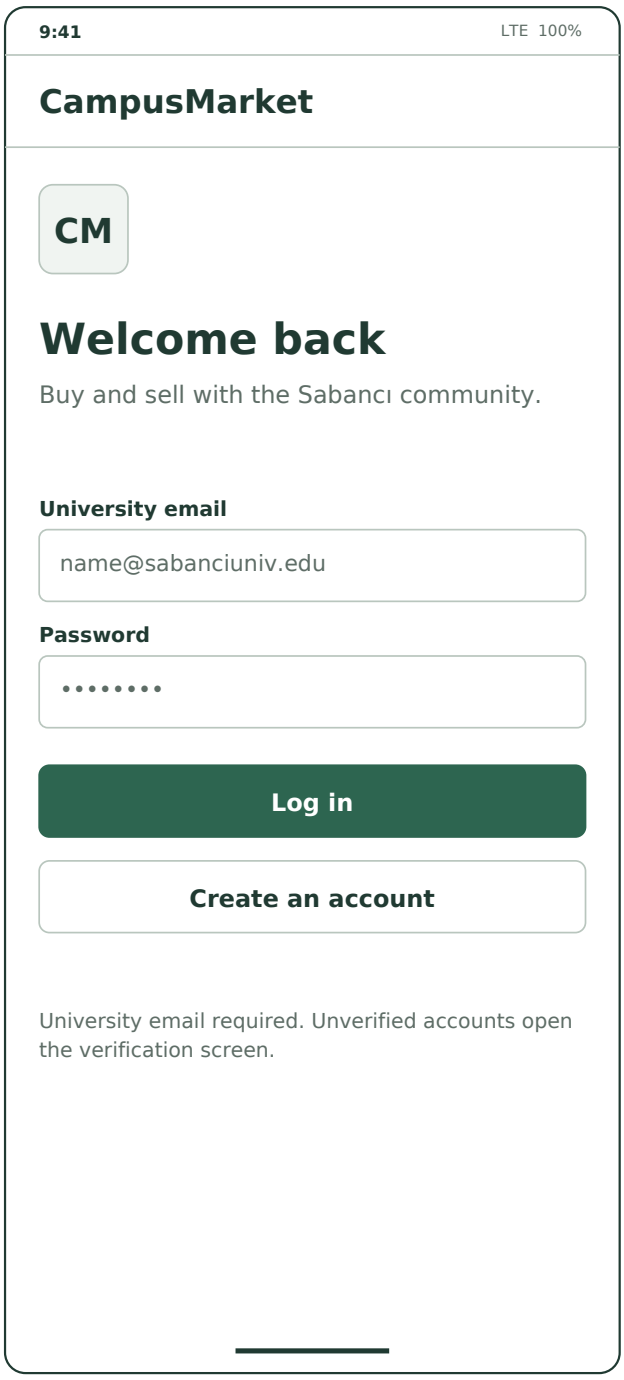

Home shortcuts also open S08 and S10. Message seller on S06 opens S11. The listing header in S11 opens S06. Log out from S04 returns to S01.

D03 Delete and D04 Mark sold are available only for owned listings; see page 9. Cancel always leaves data unchanged.

Account access

Registration is restricted to university email addresses. These are UI designs; real authentication belongs to a later step.

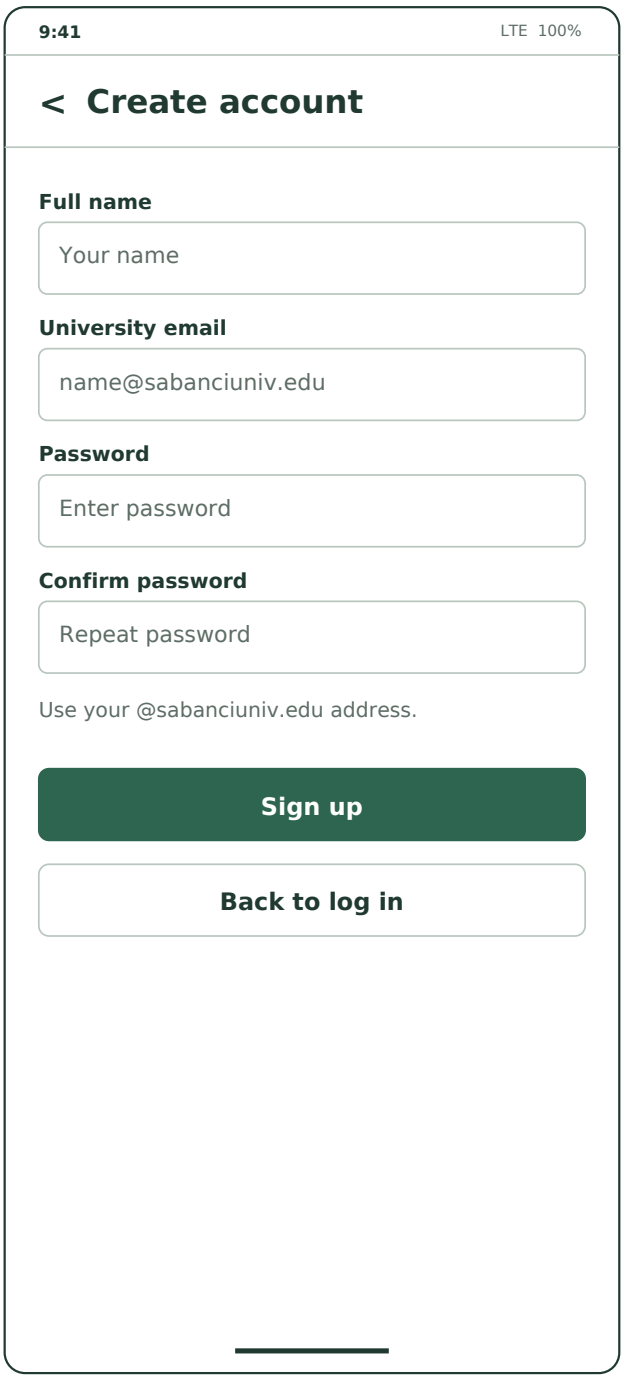

S01 Log in

Students enter their university email and password to access the marketplace.

Log in: verified → S04; unverified → S03. Create account → S02.

S02 Sign up

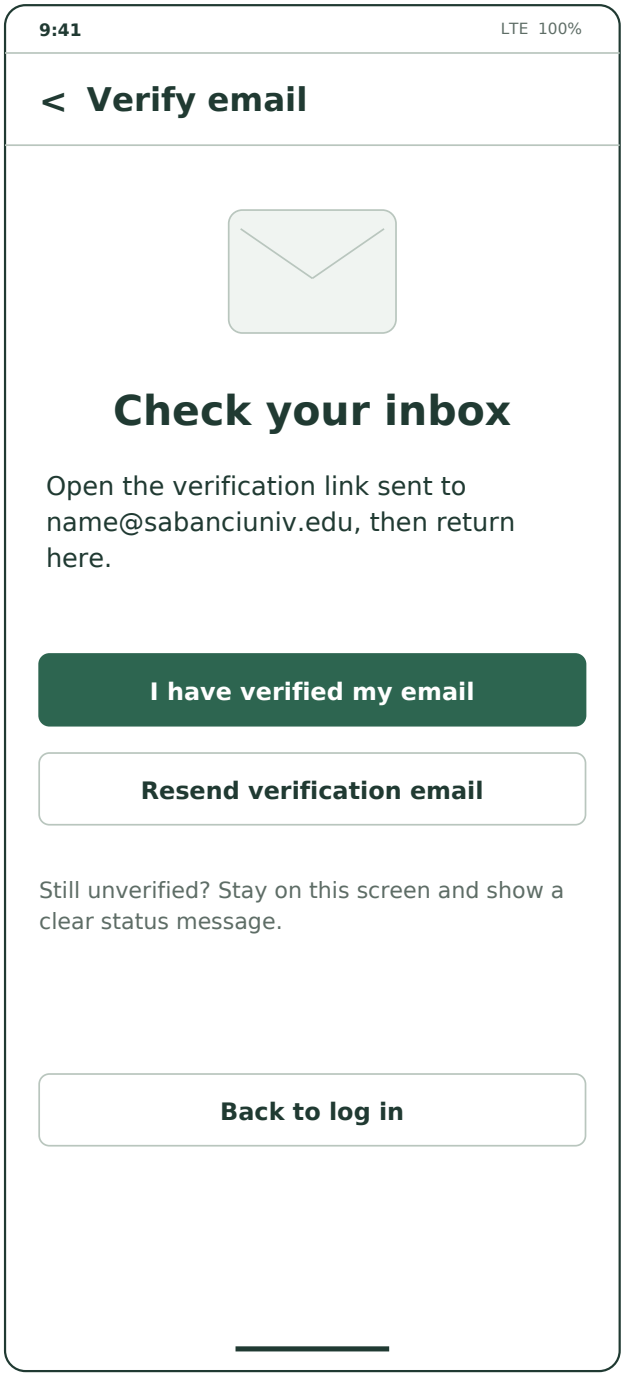

Students enter their name, university email, password and password confirmation.

Valid sign-up → S03. Invalid fields stay here with inline errors. Back → S01.

Verification & home

The home feed is the main entry to the approved marketplace features.

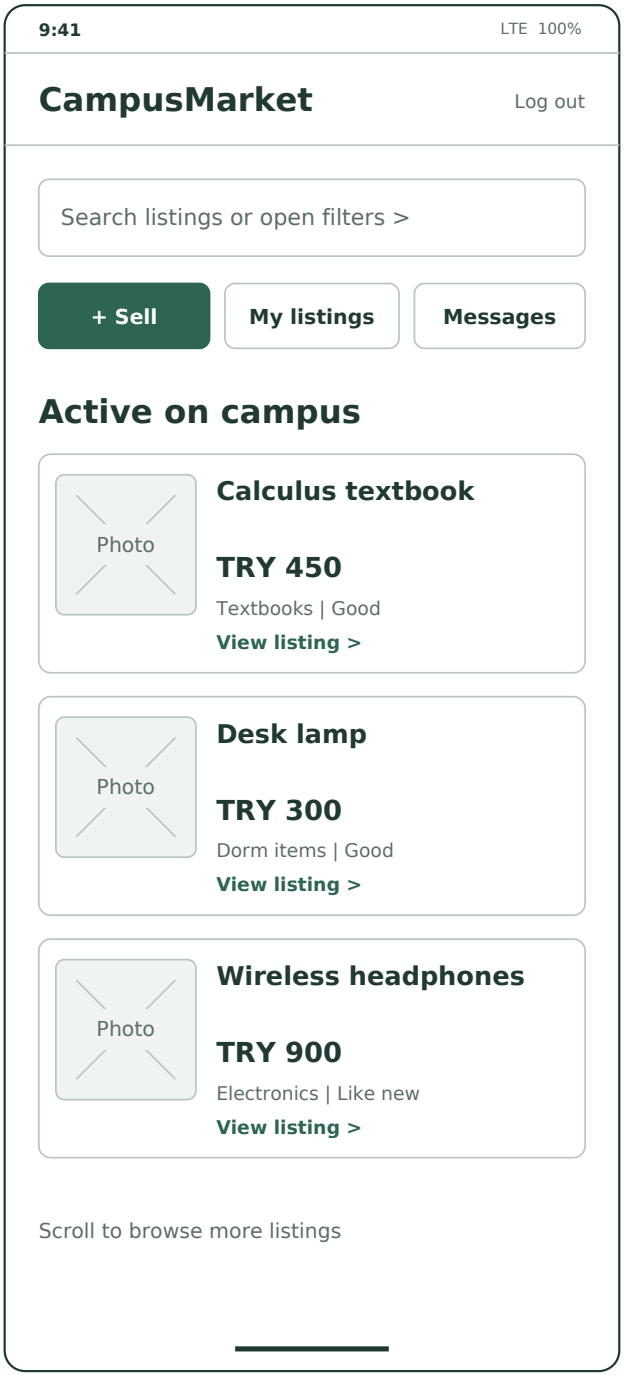

S03 Verify email

Shows the next step for a new or unverified university account and lets the student recheck its status.

Verified → S04; unverified → stay. Resend shows a status message. Back → S01.

S04 Home feed

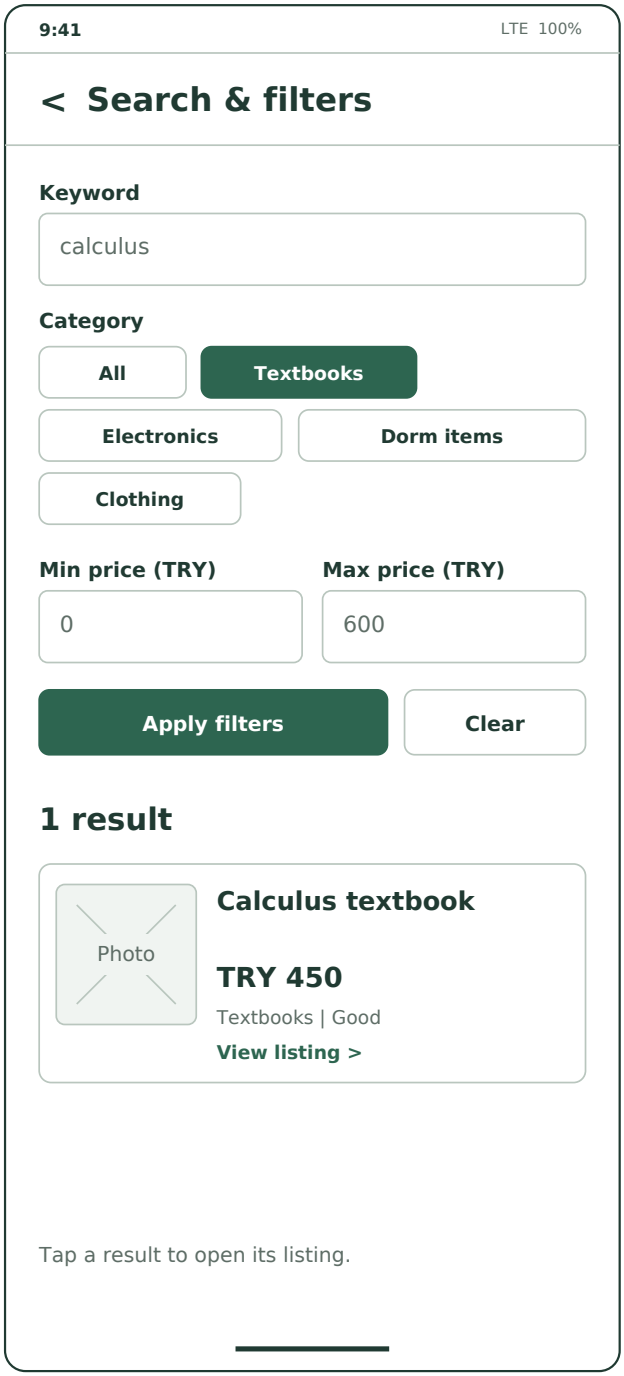

Students browse active product cards with photos and prices and choose what to view or manage.

Search → S05; card → S06; + Sell → S08; My listings → S07; Messages → S10; Log out → S01.

Find an item

Keyword, category and price filters are applied together. Product details provide the information needed to contact the seller.

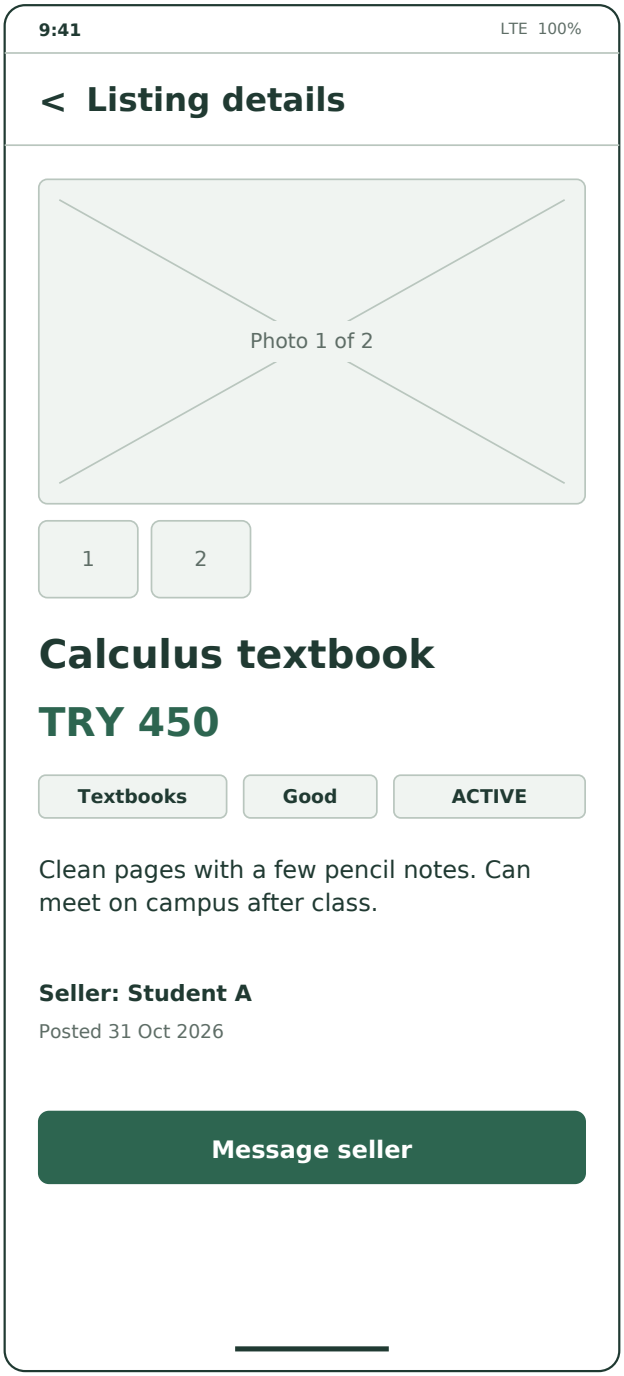

S05 Search & filters

Students enter a keyword, select a category and set optional minimum and maximum prices. Results appear below.

Apply updates results on S05. Clear resets all filters. Result → S06. Back → S04.

S06 Listing details

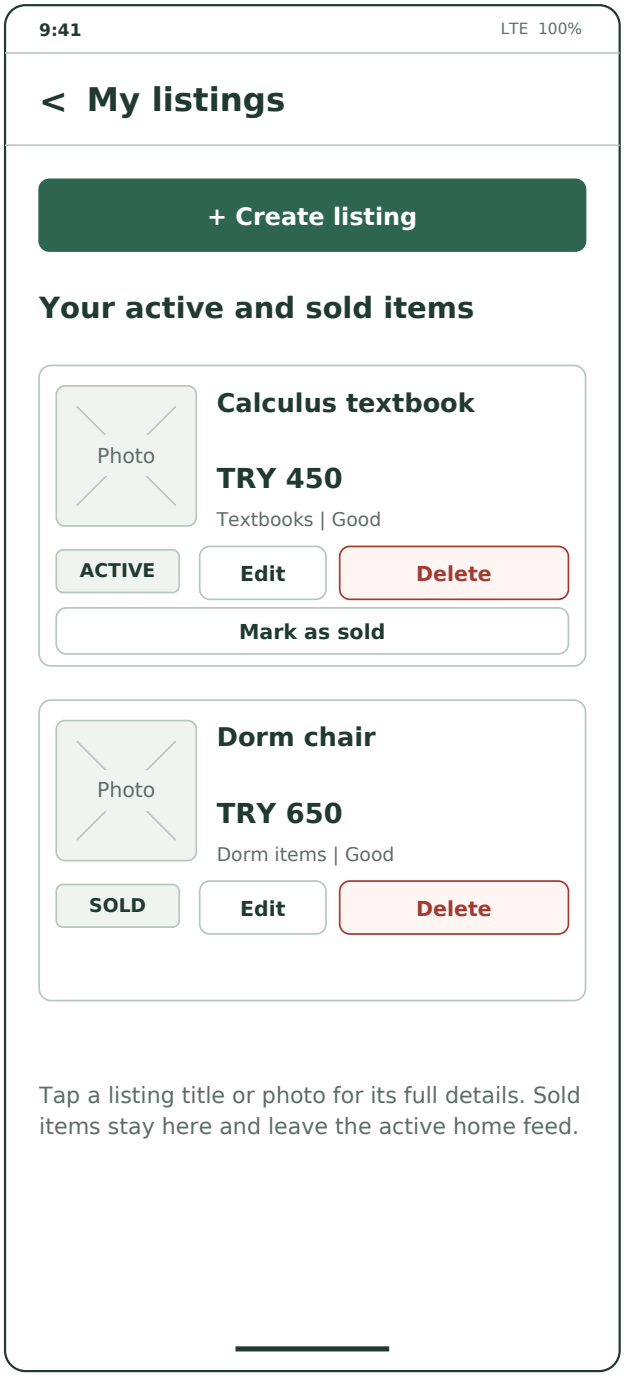

Shows photos, title, price, description, category, condition, status and seller. Tap a thumbnail to switch photos.

Message seller → S11 for this item and seller. Back returns to Home, Search, My listings or Conversation.

Manage & create listings

Only owned items appear in My listings. All listing fields from the approved proposal are present in the form.

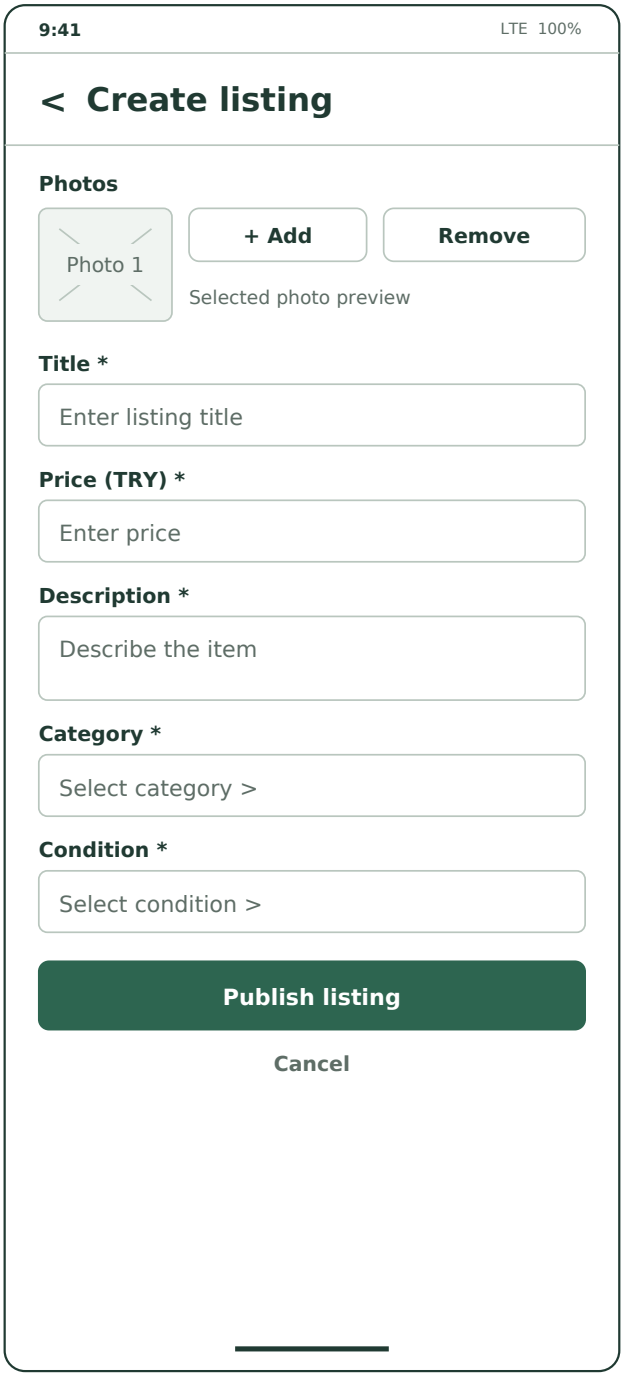

S07 My listings

Students review their active and sold items, open details, edit or remove a listing, and mark active items as sold.

Create → S08; card → S06B; Edit → S09; Delete → D03; Mark sold → D04. Back → S04.

S08 Create listing

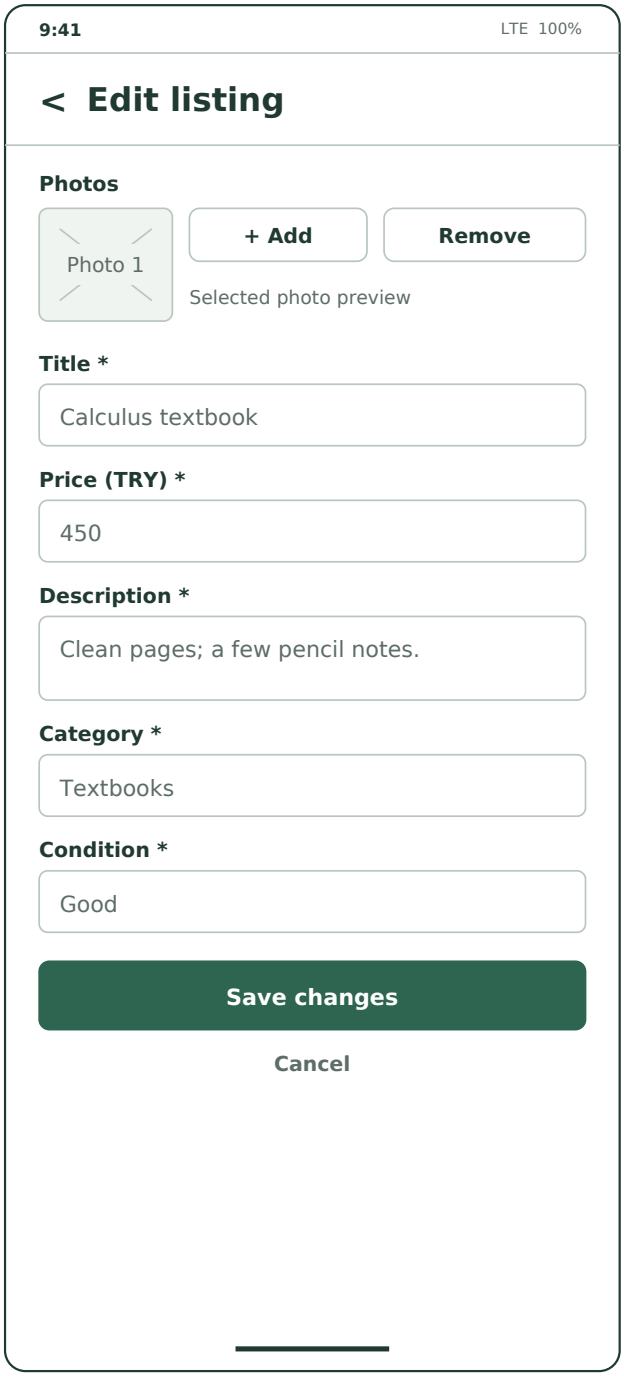

Students add photo previews and enter the title, positive price, description, category and condition. The form scrolls.

Add/Remove manages photo previews. Valid Publish → D01 → S07. Invalid → inline errors. Cancel/Back → origin.

Edit & return to messages

Editing reuses the same listing fields. The inbox makes existing conversations easy to reopen.

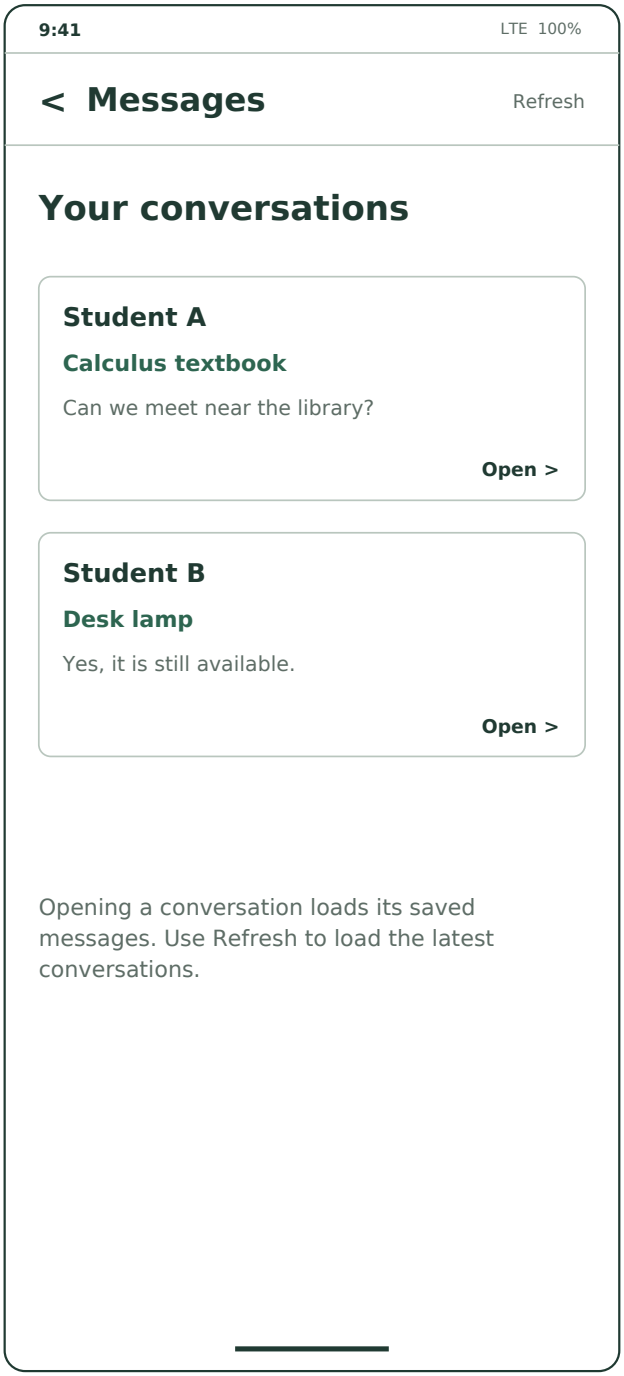

S09 Edit listing

The selected owned listing is prefilled. Students can change photos and fields before saving. The form scrolls.

Valid Save changes → D02 → updated origin. Invalid → inline errors. Cancel/Back discards edits and returns.

S10 Messages

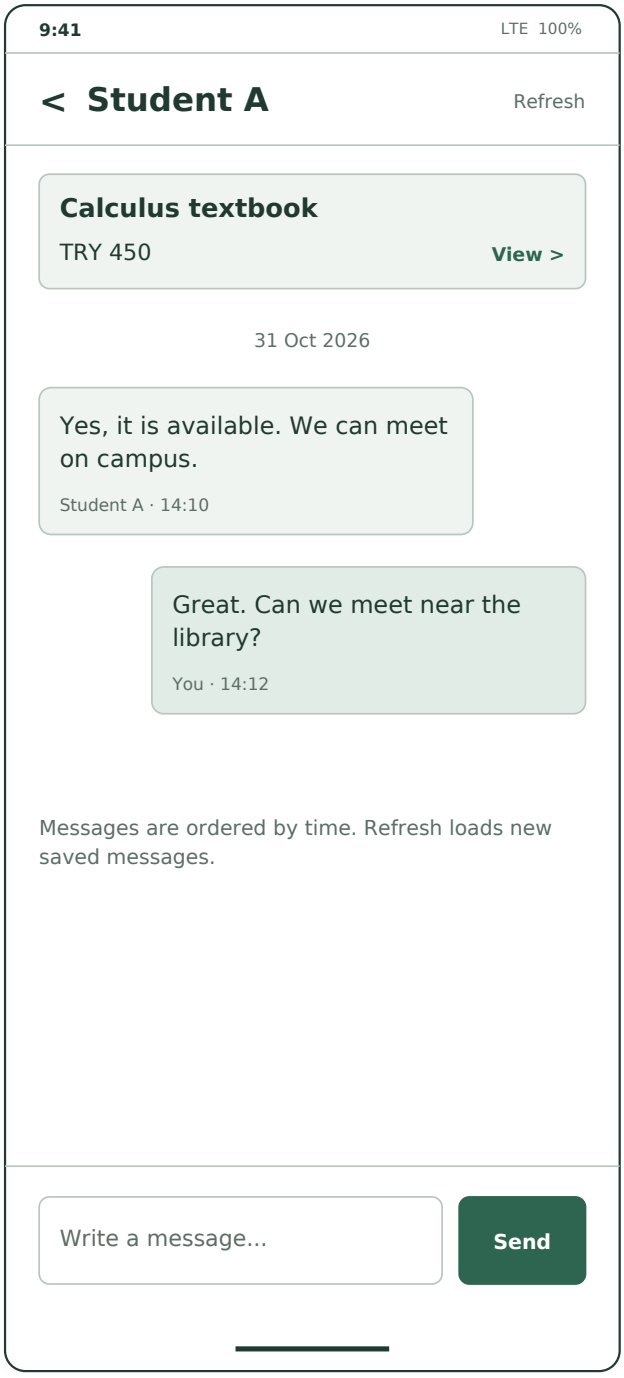

Each conversation identifies the other student, related listing and latest sample message.

Open conversation → S11. Refresh reloads the list. Back → S04. Empty state appears on page 10.

Messaging & owner view

Messaging follows the approved open-or-refresh model. Seller controls are shown only for the current user’s own listings.

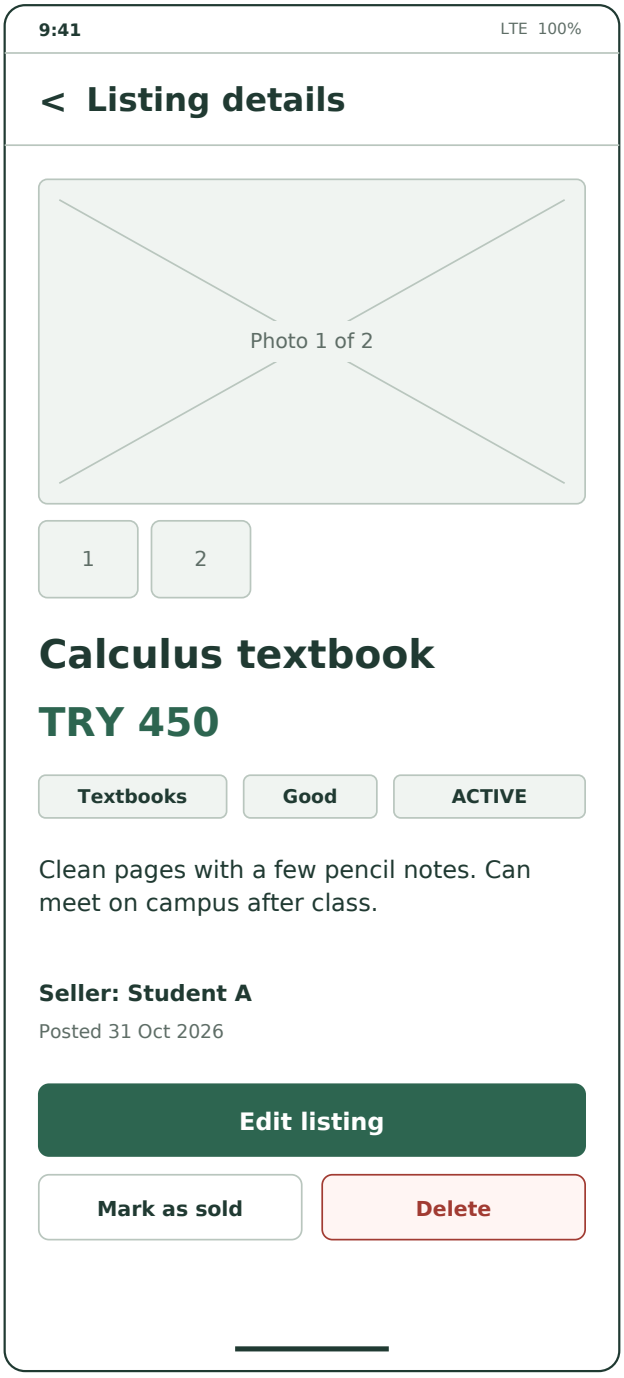

S11 Conversation

Students read time-ordered messages, type a message and send it. The header identifies the related item.

Send appends a message; blank input shows an error. Refresh reloads messages. Item header → S06. Back → origin.

S06B Owned listing details

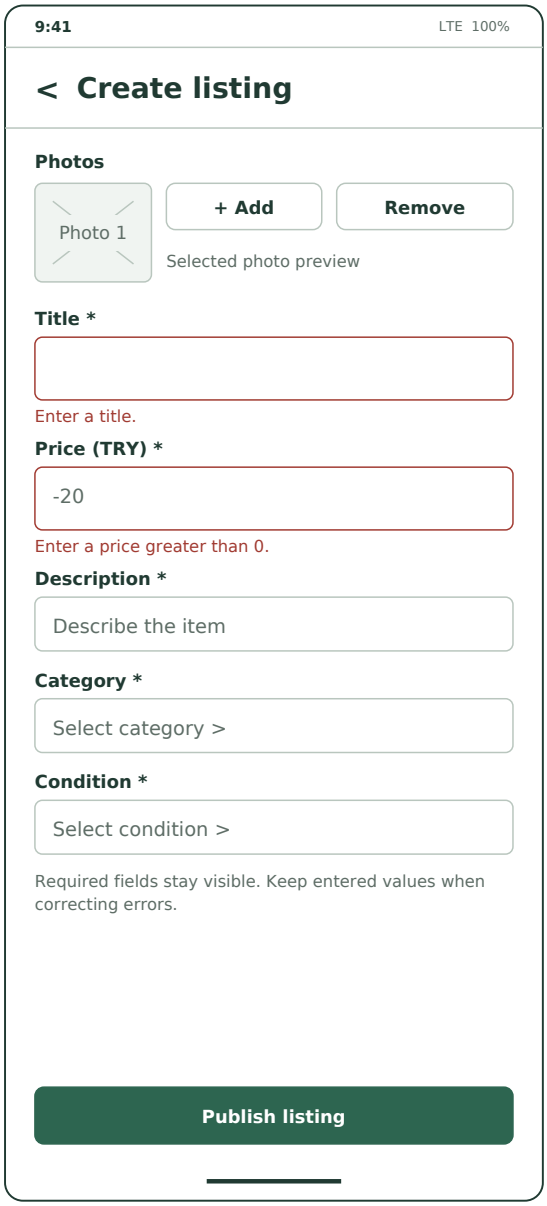

The owner sees the same listing information plus edit, mark-sold and delete controls.

Edit → S09. Delete → D03. Mark sold → D04; SOLD replaces ACTIVE and Mark as sold is hidden. Back → origin.

Form validation & confirmations

State variants complete the core interactions without adding separate feature screens.

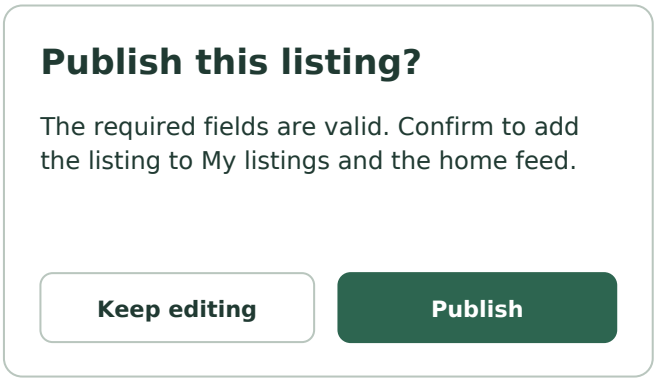

E01 Invalid listing form

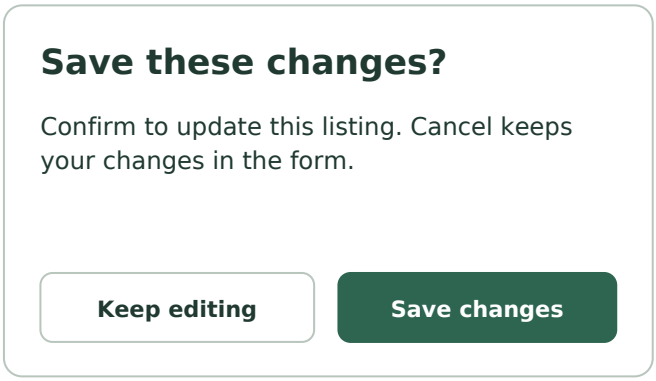

Inline errors appear directly below invalid fields. Values and selected photos are kept so the student can correct them.

Validation: required photos, title, description, category and condition; numeric price > 0. No valid submission proceeds without confirmation.

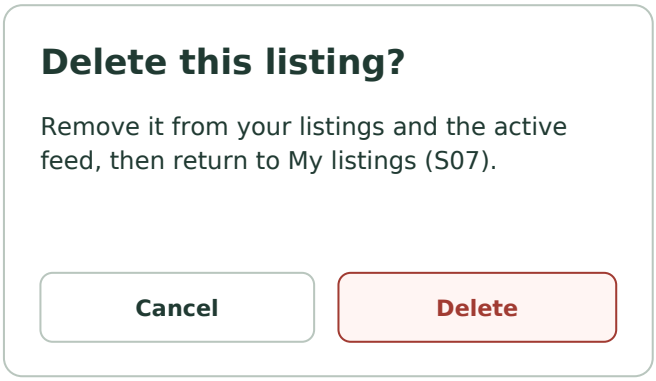

D01

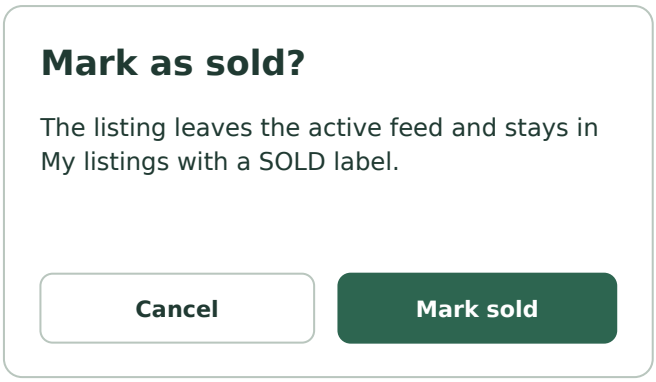

D02

D03

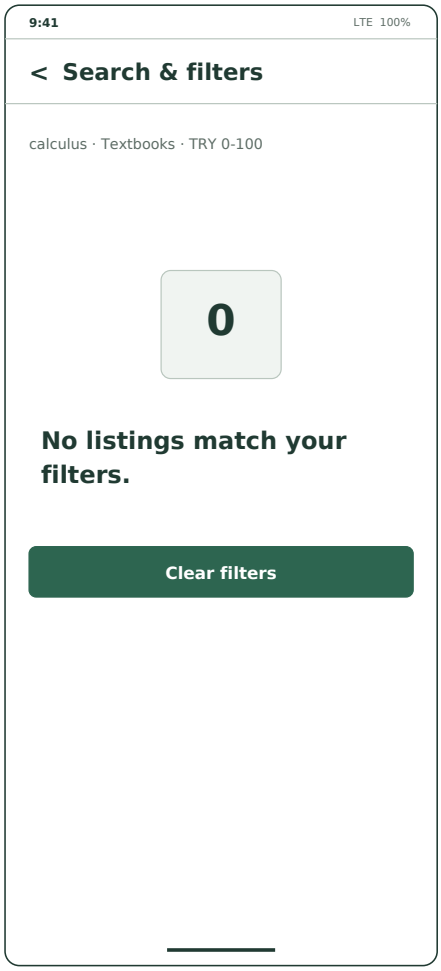

D04

Empty, error & layout states

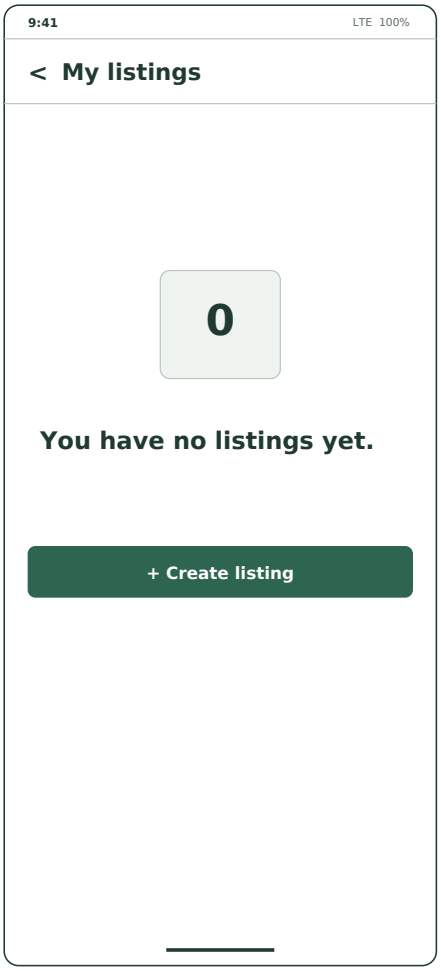

These compact variants reuse the same screens and preserve clear routes back to useful actions.

E02 No matching results

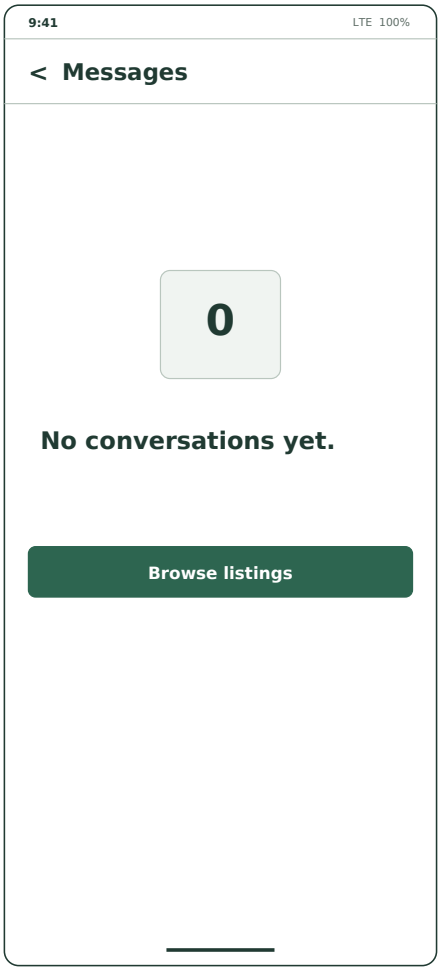

Clear filters → S05, all filters reset.

E03 No owned listings

Create listing → S08.

E04 No conversations

Browse listings → S04.

Interaction states

Account forms: show required-field, invalid university-email and password-mismatch messages inline. An unverified email stays on S03. Search: prices must be numeric and non-negative; maximum must be at least minimum.

Messaging: failed send keeps the typed message and offers retry; failed refresh keeps the last visible messages. Image errors keep a labeled placeholder. A sold item stays in My listings and is removed from active search/feed results.

Dialog Cancel returns to the unchanged underlying view. Confirmed actions show a short success message.

Consistency & scope coverage

Design decisions stay within the approved CampusMarket proposal and the published Step 2 requirements.

Shared layout rules

One app bar, labeled buttons, 20 px page padding and shared 8/12/16/24 px gaps. Primary actions share the green treatment. Images use labeled placeholders and fields stay in one column.

Reference phone: 360 × 800 logical px. On narrow portrait phones, text wraps and category controls move to the next line. Forms/details and lists scroll. The keyboard keeps the active input and submit/send controls reachable.

Form selectors expand below the field, then collapse with the chosen value. Category: Textbooks / Electronics / Dorm items / Clothing. Condition: New / Like new / Good / Fair. Cancel leaves the previous selection unchanged.

Approved feature → screen coverage

University accounts	**S01-S03**
Active feed and listing details	**S04, S06 / S06B**
Keyword, category and price filters	**S05, E02**
Create, edit, delete, mark sold	**S07-S09, E01, E03, D01-D04**
Conversation list and messaging	**S10-S11, E04**

Design sources: CampusMarket Group 14 Step 1 proposal; CS310 Project Step 2 specification (31 Oct 2026); Week 4 widget lectures; Week 5 Layout, Styling and Theming / Navigation. All navigation arrows describe planned UI behavior.

Optional boosts and ratings are outside this core design.
